3 Visualize the data using Python by plotting the graphs for assignment no. 1 and 2. Consider a suitable data set. Use Scatter plot, Bar plot, Box plot, Pie chart, Line Chart.

```
import pandas as pd

# Create DataFrame
data = {
    'Student': ['Ala', 'Bele', 'Cilia', 'Ella'],
    'Maths': [98, 95, 82, 80],
    'Science': [82, 78, 95, 82],
    'English': [78, 60, 80, 73]
}

df = pd.DataFrame(data)
print(df)
```

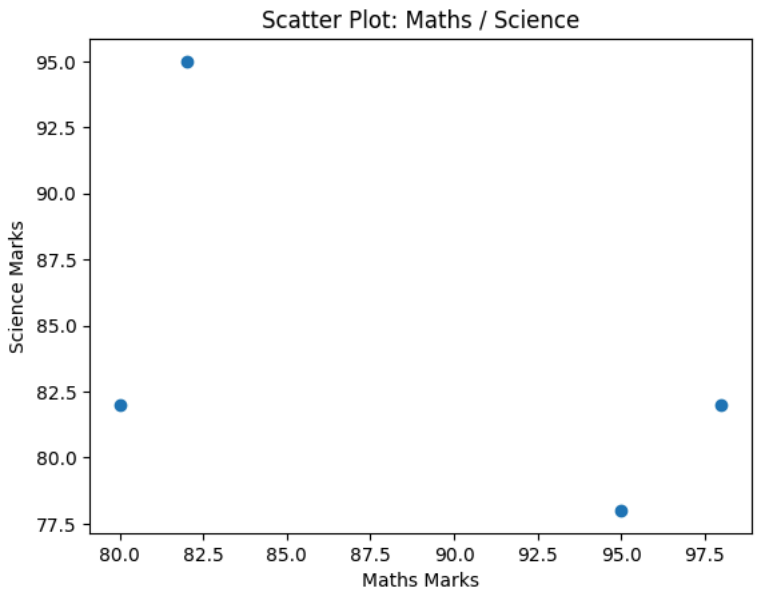
```
  Student  Maths  Science  English
0     Ala     98       82       78
1    Bele     95       78       60
2   Cilia     82       95       80
3    Ella     80       82       73
```

Scatter Plot

Purpose: Relationship between two numerical variables (Maths vs Science)

```
import matplotlib.pyplot as plt

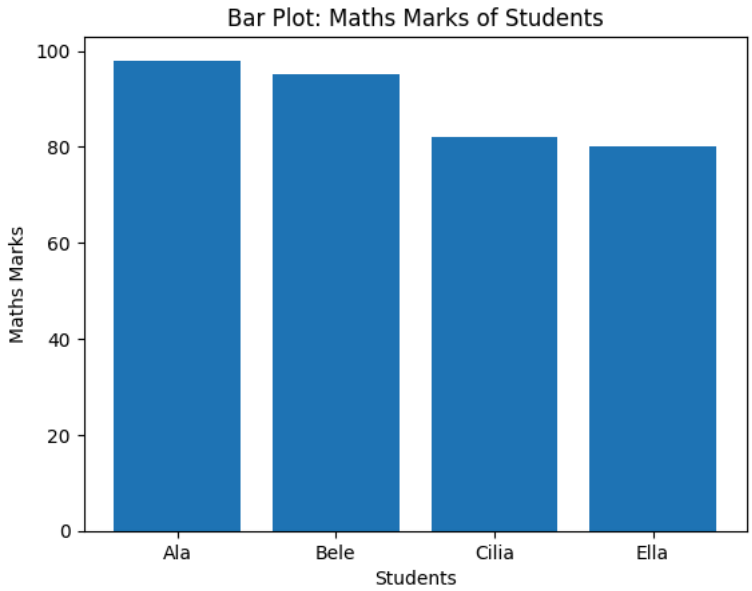
plt.scatter(df['Maths'], df['Science'])
plt.xlabel('Maths Marks')
plt.ylabel('Science Marks')
plt.title('Scatter Plot: Maths / Science')
plt.show()
```



Bar Plot

Purpose: Compare marks of students in Maths

```
plt.bar(df['Student'], df['Maths'])
plt.xlabel('Students')
plt.ylabel('Maths Marks')
plt.title('Bar Plot: Maths Marks of Students')
plt.show()
```

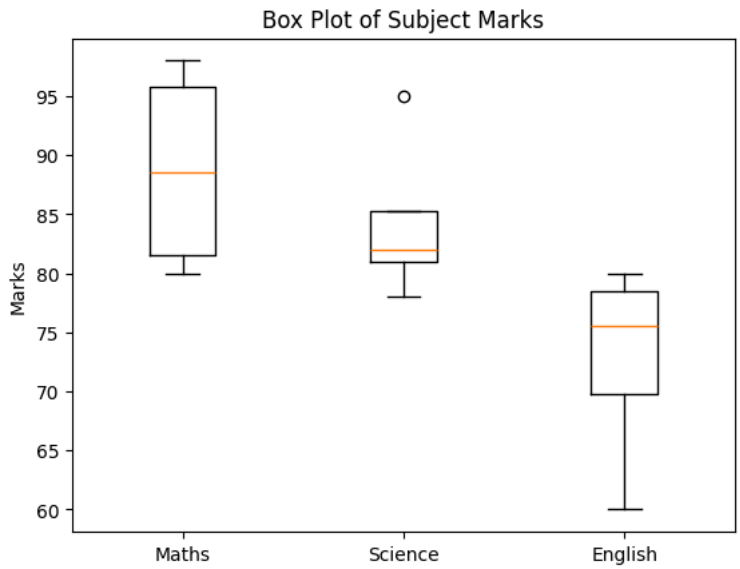


Box Plot

Purpose: Show distribution and outliers of marks

```
plt.boxplot([df['Maths'], df['Science'], df['English']],
            labels=['Maths', 'Science', 'English'])
plt.title('Box Plot of Subject Marks')
plt.ylabel('Marks')
plt.show()
```

```
/tmp/ipython-input-2270569777.py:1: MatplotlibDeprecationWarning: The 'labels' parameter of boxplot() has been renamed 'tick
  plt.boxplot([df['Maths'], df['Science'], df['English']],
```

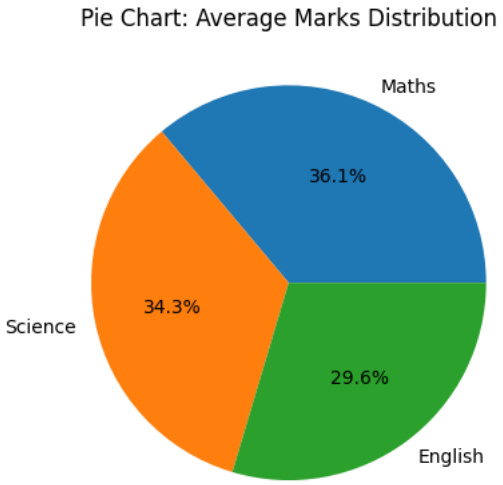


Pie Chart

Purpose: Percentage contribution of total marks by subject (average)

```
average_marks = df[['Maths', 'Science', 'English']].mean()

plt.pie(average_marks, labels=average_marks.index, autopct='%1.1f%%')
plt.title('Pie Chart: Average Marks Distribution')
plt.show()
```

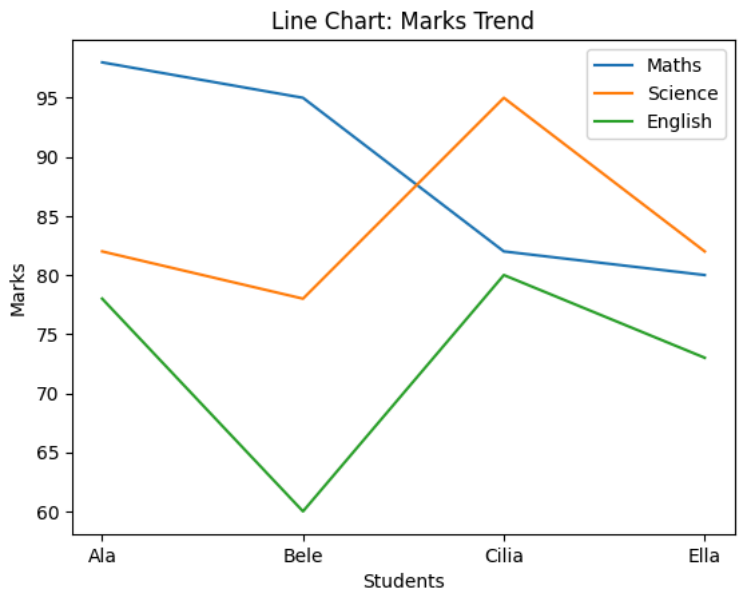


Line Chart

Purpose: Trend of marks across students

```
plt.plot(df['Student'], df['Maths'], label='Maths')
plt.plot(df['Student'], df['Science'], label='Science')
plt.plot(df['Student'], df['English'], label='English')

plt.xlabel('Students')
plt.ylabel('Marks')
plt.title('Line Chart: Marks Trend')
plt.legend()
plt.show()
```



Correlation marrix - HeatMap

```
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns

# Re-define DataFrame df to ensure it's available
data = {
    'Student': ['Ala', 'Bele', 'Cilia', 'Ella'],
    'Maths': [98, 95, 82, 80],
    'Science': [82, 78, 95, 82],
    'English': [78, 60, 80, 73]
}
df = pd.DataFrame(data)

correlation_matrix = df[['Maths', 'Science', 'English']].corr()
```

```
plt.figure(figsize=(6, 5))
sns.heatmap(correlation_matrix, annot=True, cmap='coolwarm', fmt=".2f")
plt.title('Correlation Matrix Heatmap of Subject Marks')
plt.show()
```
